

WEBCON BPS 2019.1

history of changes for version 2019.1.4.95

New features

[Applications]

- 1 Added support for multiple business entities in the absence report on WEBCON BPS Portal.
- 1 Added the option to filter employees in the absence report on WEBCON BPS Portal

Information

[Processes]

- 1 Changes introduced in this version will break the compatibility of the Export-Import mechanism. Exported process packages created in versions 2019.1.4.61 and older cannot be imported to the newest system version. In order for an import to be possible, update the environment to the newest version and export the processes again.

Changes to existing features

[Actions]

- 1 SOLR database elements will be reindexed after personal data is removed via action.

Bug fixes

[General]

- 1 Corrected some Russian translation issues.
- 1 The installer should now correctly create a WebCon.WorkFlow.SDK library in the WEBCON BPS Designer Studio folder.
- 1 Fixed handling of guest type accounts in AAD synchronization.
- 1 The installer should now correctly verify the .Net Core version.
- 1 Fixed an issue when synchronizing the BPS user list with the AAD in situations where there were groups created only in the AAD and the WriteBack option was enabled in the synchronization.
- 1 Fixed an inconsistency in the Export-Import mechanism when migrating views that didn't have a defined display order.

[Applications]

- 1 Fixed the mechanism that generates the list of recent activities. The list of recent activities should display the correct names of users that modified instances.
- 1 Filters on Portal reports should now be able to filter by |
- 1 Portal should no correctly display reports that contain a standard filter using the "Yes/No" form field.
- 1 Improved sorting for calculated floating-point number columns on Portal reports.

[Form fields]

- 1 Attachment categories containing parentheses in their name should now be displayed correctly.
- 1 Fixed an issue with the mechanism for setting form field values. It should no longer cause errors when setting a NULL value.

[Plugins]

- 1 Fixed an issue with test invoking the public API `Get_started_element-Get_started_element_fields-Get_element`.
- 1 `FormFieldExtension` and `CustomFormField` SDK controls should now contain additional information about the context of the workflow instance.
